Allowable Subject Matter

Claims 1 – 35 are allowed. The prior art of record fail to teach controlling a vehicle with a 4x4 driving system or active differential and a roll stability control system, comprising, among other limitations, generating a rollover signal in response to a potential rollover situation as determined by dynamic conditions sensed onboard the vehicle; transferring driving torque both through an electronically controlled center differential or an electronically-controlled transfer case and the to the front wheels of the vehicle; increasing a torque in front outside wheel of the vehicle through the differential and braking a rear outside wheel of the vehicle in response to the sensed signal; in response to the rollover condition, controllingly disengaging an inside wheel of the vehicle from an outside wheel of the vehicle with the differential; and applying a powertrain torque to a rear outside wheel of the vehicle so as to counter a deceleration caused by the braking of the outside wheel - the differential being further used to distribute/limit torque among the wheels of the vehicle so as to help prevent actual rollover.
